

Customer Reference

Antaya Technology
Manuel Machado,
Manager, Tool Room

"I would like to comment on Strategic Technology Solutions' (STS) '3DQuickPress' being an excellent die design software program and also on the training and technical support that comes with that purchase. All of the people that I've dealt with at STS have performed commendably by being extremely helpful in their training including the live and the on-line sessions. The continued technical support has been the absolute best that I have ever experienced. Thanks for proving to me and the management at Antaya Technologies, Inc. that we've made the best possible acquisition with 3DQUICKPRESS."

Berkshire Manufactured Products
Pete Meymaris

"I matched your blank to mine and they were within .001 of each other! It took me 2 days to calculate mine the old fashioned way. It took 3DQuickForm Pro less than 10 minutes. You have a fantastic software that has made my job so much easier! I love all your products. I have to add that I would be nowhere without the help of Ron Flaugh (from STS's support). Everything I know I owe to him. He is so professional and a pleasure to learn from. He has always been there to help with so many things which is a huge help with the complex aerospace parts I design. He has never let me down."

Bermo Inc.
Jay Suhsen,
Tool Designer

"We were searching for an add-on software that would speed up die design and something that we could tailor to our unique process of building tools. 3DQuickPress is meeting our expectations."

CCL
C.N. Tsang,
General Manager

"We're very pleased to choose 3DQuickPress in 2004 and its success has proven it a right choice. Our dream of completing 3D design and manufacturing for plastic and metal parts in a single CAD environment comes true. The success of the production has exceeded our customer's expectation. Today, our technical competence is optimizing our products to meet customer satisfaction in the speedy SolidWorks design environment."

Centreville Tool & Die
Ron Whittal,
Design Engineer

"If all you ever use it for is strip layouts, it is a real time saver. Customer service is second to none."

CFM
K.K. Ko,
Design Manager

"Eliminated design errors, and reduced development time help us to concentrate more on the complete manufacturing process to meet customer's demand. Our choice to go with 3DQuickPress is an important step to upgrade the company skill set."

Dee Zee Manufacturing
Shawn Shulz

"Would recommend this to everyone! It's like playing a video game, its addictive once you start; you can't stop!"

ETCO Inc.
Joe DeSio,
Die Design Engineer

"3D Quick Press reduced our design time by 30% and I have not completed the PRL Library. I can predict with confidence a 50% design time reduction at minimum, once our library is complete. Modification and quoting times have been reduced also."

Exedy America
Michael Moore

"User friendly as it can be, some of the best software that he has ever seen" - using 3DQuickForm

FB Tool
Mark McCumber

"I hope that our competitor doesn't have this software"

Flexco
Larry Watson

"He has never been able to created a better strip layout before he had 3DQuickPress"

Penn United
Dan Hilliard,
Engineering Dept.

"First of all I would like to say that I am always very impressed at the speed and the lengths that STS goes through to support their customers. I wish every vender that we worked with was as dedicated to their customers as STS is. Please keep up the excellent work!"

Precision Tool & Stamping, Inc.
Brandon Lee

"3DQuickPress allows PTS to design faster with fewer mistakes. The PRL's with the basic geometry completed and accompanying drawing files make for much faster designs. During the quoting process, 3DQuickPress allows for very fast strip development. Our quotes are more accurate due to the fact that 3DQP optimizes the strip using the least amount of material as possible."

RT&D
Kevin Perrault,
Vice President

"SolidWorks is a good common interface, and to use it in the downstream application such as tool design is our next logical step. If we keep on using the same approach without change, we will lose out. Speeding up the production time is not an option. We managed to complete this 2D to 3D transition in a year."

Trueline Inc.
Ron Anderson

"Your customer support is the best! I've dealt with other technical support with other companies, but yours far outweighs any I have ever received. It's awesome!"

Victory Tool Division
Dean Hoffman,
Tool Designer

"Tool designers need software that can assist them in the whole design process, not just the manufacturing part - 3DQuickPress is great for this."
